

Iino Marine Services Co., Ltd. Japan

“Tanker management is changing – we are looking for continual improvement and our customers desire this. We need systems that help us with this and help us demonstrate that we are always improving – Task Assistant does this for us.”

Our seafarers and shore-based staff will better equipped to meet these challenges now that we use the Task Assistant. The fact that Task Assistant requires no special training is so important to us - it makes life easier for our seafarers and saves time and money.”

Satoru Nakajima
Director
Iino Marine Services

Task Assistant is developed and supported by Ulysses Systems, a leading provider of innovative business intelligence solutions to the maritime and other industries. Ulysses provides solutions based upon advanced telecommunications and information systems technologies that help people work intuitively without special software training. Ulysses' product design has at its core an understanding of how human beings perceive and process information, delivering systems that work the way people do and making information processing fundamentally more efficient.
